## **DETAILED ACTION**

### ***Continued Examination Under 37 CFR 1.114***

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 05/12/2008 has been entered.

### ***Claim Rejections - 35 USC § 103***

2. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.

3. Claims 1-4, 6-9 and 12-26 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sugioka et al. or Kugure et al., each independently in combination with Matsumura et al., for reasons cited in the actions.

### ***Response to Arguments***

4. Applicant's arguments filed 04/09/2008 have been fully considered but they are not persuasive.

5. While applicant has added the “consisting of” language, as mentioned in applicant’s arguments, the fillers are within the scope of the items included in the “consisting of” phrase, i.e., the non-halogen fire retardants. Thus, it is unclear how “the combination of Sugioka and Matsumara is clearly outside the scope of the amended claims” as claimed by applicant. It is unclear what required component of the prior art is supposed to be excluded by the new language.

6. In response to applicant's argument that the claimed composition is used in a different process than that taught by the prior art, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim. The prior art references are still in the field of applicant’s endeavor, i.e., thermoplastic resins and products.
